

## Contents

Preface .....	v
Early Japanese contributions to space weather research—1945–1960—	
A. Nishida .....	1
Hydrodynamics, magnetohydrodynamics, and astrophysical plasmas	
E. N. Parker .....	23
The 1960s—A decade of remarkable advances in middle atmosphere research	
M. A. Geller .....	41
Hinode “a new solar observatory in space”	
S. Tsuneta, L. K. Harra, and S. Masuda .....	63
Coronal mass ejections and space weather	
N. Gopalswamy .....	77
Magnetotail after Geotail, Interball and Cluster: Thin current sheets, fine structure, force balance and stability	
L. Zelenyi, H. Malova, A. Artemyev, V. Popov, A. Petrukovich, D. Delcourt, and A. Bykov .....	121
Simulating solar ‘climate’	
M. Dikpati .....	171
Evidence for solar forcing: Some selected aspects	
J. Beer and K. McCracken .....	201
Total solar irradiance variability: What have we learned about its variability from the record of the last three solar cycles?	
C. Fröhlich .....	217
Mechanisms for solar influence on the Earth’s climate	
J. D. Haigh .....	231
Variability in the stratosphere: The sun and the QBO	
K. Labitzke and M. Kunze .....	257
Gravity wave coupling from below: A review	
R. A. Vincent .....	279
What we have learnt from CPEA (Coupling Processes in the Equatorial Atmosphere): A review	
S. Fukao .....	295
Vertical coupling by the semidiurnal tide in Earth’s atmosphere	
J. M. Forbes .....	337
Index .....	349
