|--|-----|
| Preface | v |
| Editor and Contributors | vii |
| Chapter 1. Introduction | |
| Environmental change and human-induced change | |
| — Monsoon Asia is one of the important area for regional study for | |
| fluvial plain development considering natural environmental change— | |
| S. Haruyama | 1 |
| Chapter 2. Lower Mekong Basin | |
| — Existing environment and development needs— | |
| M. Kamoto and M. Juntopas | 23 |
| Chapter 3. Characteristics of geomorphological elements of the tropical | |
| flood plain in the SAR image and the SRTM DEM | |
| H. Ohkura and Y. Wada | 43 |
| Chapter 4. Relationships between river morphology and grain size | |
| distributions of the river ridge materials of the Tonle Sap River | |
| S. Oketani and S. Haruyama | 55 |
| Chapter 5. Landform and stratigraphic evolution of the Mekong River | |
| lowland, with special emphasis on tidal influence during the Holocene | |
| transgression | |
| K. Hori, S. Haruyama and S. Sieng | 79 |
| Chapter 6. Floodplain characteristics of the Mekong Delta in Cambodia | |
| — Geomorphologic land classification map showing the typical | |
| landform combination of the Mega Delta— | |
| S. Oketani and S. Haruyama | 97 |
| Chapter 7. The basic study for evaluation of groundwater resources in | |
| inland area of Mekong Delta utilizing by vertical electric survey | |
| — Toward to new methodology suggestion of understanding | |
| sedimentation in Holocene— | |
| S. Hiraide, S. Haruyama, H. Nakazato, K. Meng, S. Sineg | |
| and K. Suzuki | 139 |
| Chapter 8. Land use and fluvial geomorphology of the lower Mekong | |
| delta in Vietnamese territories | |
| — Lesson from local knowledge of the land use for future regional planning | |

| | |
|---|-----|
| based on geomorphologic features— S. Haruyama | 165 |
| Chapter 9. Rice farming system and landforms series of inland Mekong River Delta in Cambodia territory —Is it possible for living with flood in the mega Delta?— S. Haruyama and T. Ito | 197 |
| Chapter 10. The development of landforms and Angkor kingdom period in the northwestern area of Lake Tonle Sap, Cambodia —The impact of Mekong river flood for lake side plain— A. Fukano and S. Haruyama | 235 |
| Chapter 11. 40 years in the lowest part of Mekong River Delta —The Mekong River flooding in history of the delta development— T. V. H. Le, S. Haruyama, H. N. Nguyen and T. C. Tran | 259 |
| Chapter 12. The impact evaluation for lower Mekong flood because of man-made structures and natural environmental change T. V. H. Le, S. Haruyama and H. N. Nguyen | 295 |
| Chapter 13. Introduction of traditional riverbank protection works of Japan to the Mekong River in Vientiane, Lao PDR Y. Kato | 323 |
| Chapter 14. Rice crop pattern of the lowlands related with flooding in Cambodia —Indigenous skills and knowledge for sustainable agriculture development in Mekong Delta— S. Haruyama and C. Nhean | 339 |
| Supplement S. Haruyama | 363 |
