PREFACE

The research on cosmic rays proceeds in close cooperation with many fields of the natural sciences. When we refer to the historical development of cosmic ray research, it becomes clear that the research on cosmic rays has made progress with those of many other fields in sciences from the discovery of cosmic rays, via its great contribution to particle physics and its relation to high energy phenomena in cosmic space.

At present, it is well recognized that the nature of "primary" cosmic rays should be fully understood in the investigation of the so-called "secondary" cosmic rays which are produced by primary particles entering the terrestrial atmosphere due to their interaction with the atmospheric gases. In the past, therefore, there was some anxiety that two specialist groups had possibly been formed in cosmic ray research. In this country, such a situation was unfortunately found until recently in the history of cosmic ray research, and it still seems that this anxiety has never fully disappeared from those who are interested in cosmic ray physics.

Now, it can be said that the intrinsic nature of cosmic rays was uncovered in some detail through the mutual interaction between cosmic ray research and various other fields of science, as cited above, while cosmic ray particles themselves have become an important means of studying the high-energy phenomena in this Universe. Truly speaking, it may be said that, at the present moment, the cosmic ray research can not be done independently of the progress in astrophysics, in particular, high-energy astrophysics. In some way, cosmic ray physics has gradually begun to play an important role as a "tool" in the research of astrophysics. In view of this, it may be concluded that the research on cosmic rays is now called "Cosmic Ray Astrophysics", since the most interesting and developing field in this research is now closely related to astrophysics.

Taking the above situation on cosmic ray research into consideration, we have compiled this book with an aim to review the current state of research in cosmic ray physics. In consequence, the contents of this book have been specially selected. The editors, therefore, hope that, while studying this book, the readers may find many important fields in cosmic ray research such as their essential role in high-energy astrophysical phenomena and the current topics of cosmic ray astrophysics.

If we had planned to compile a book dealing with the ultra-high energy phenomena related to Cosmo-Genesis and the unified theory in particle physics currently in rapid progress, the contents of the present book would have been completely different from the present edition, since the main objective of this book is cosmic ray astrophysics.

Finally, it should be noted that this book is an English edition for that which was originally published in 1983 in Japanese, and that one of the Editors (K. S.) is solely responsible for making this English edition.

December, 1986

Chapter 1

HISTORICAL PERSPECTIVE ON THE COSMIC RAY

RESEARCH	S. HAYAKAWA	1
1.1 The History of Cosmic Ray Research		1
1.2 Early History		2
1.3 Decades Searching for Future Projects		3
1.4 The Age of Elementary Particle Physics		4
1.5 The Age of Cosmic Physics		11
1.6 Present Status of Cosmic Ray Research		17

Chapter 2

RESEARCH FIELDS IN COSMIC RAY ASTROPHYSICS

	K. SAKURAI	21
2.1 Introduction		21
2.2 Perspective on Cosmic Ray Research		23
2.2.1 In galactic and extragalactic space		24
2.2.2 In the solar system and its neighborhood		26
2.2.3 The sun and the stars		29
2.2.4 Relation to cosmology		32
2.3 Cosmic Rays and Their Associated Phenomena		33
2.3.1 Fundamental problems		33
2.3.2 Association with astrophysical phenomena		38
2.4 The History of Cosmic Rays		43
2.4.1 Secular variation of cosmic rays		44
2.4.2 Interactions with cosmic matter		47
2.5 Cosmic Rays in the Solar System		48
2.5.1 Solar-flare particles		48
2.5.2 Modulation mechanisms of cosmic rays		51
2.5.3 Planetary magnetospheres and cosmic rays		54
2.6 Behavior of Cosmic Rays in the Atmosphere		56
2.6.1 High-energy phenomena and the air showers		56
2.6.2 Cosmic ray sources and astrophysical neutrinos		57

2.7 Relations among Research Fields	58
References	59

Chapter 3**ELECTROMAGNETIC PROCESSES AS RELATED TO****COSMIC RAY PHENOMENA**

J. NISHIMURA 63

3.1 Introduction	63
3.1.1 The unit of energy	64
3.1.2 The unit of length	64
3.1.3 The cross-section and the mean-free paths	66
3.1.4 The Lorentz transformation	67
3.2 Electromagnetic Interactions	73
3.2.1 Radiations from a charged particle in acceleration	74
3.2.2 Thomson scattering	78
3.2.3 Compton scattering	80
3.2.4 Inverse Compton scattering	83
3.2.5 Synchrotron radiation	84
3.2.6 Photoelectric effect	89
3.2.7 Blackbody radiation	91
3.2.8 Ionization losses	97
3.2.9 Bremsstrahlung	100
3.2.10 Electron pair creation	107
3.2.11 Cherenkov radiation	117
3.2.12 Physical processes in a strong magnetic field	120
References	123

Chapter 4**GALACTIC COSMIC RAYS: THEIR ORIGIN AND****PROPAGATION**

K. ITO 125

4.1 Galactic Cosmic Rays—Definition	125
4.2 Observations of Galactic Cosmic Rays	126
4.2.1 Chemical composition	126
4.2.2 Observational methods	130
4.2.3 Energy distribution and anisotropy	133
4.3 The Propagation and the Origin of Galactic Cosmic Rays	138
4.3.1 Models of propagation	138
4.3.2 Nuclear transformation in interstellar space	139
4.3.3 Energy dependence of their chemical abundances	143
4.3.4 Lifetime and propagation	145
4.3.5 The origin and its relation to element synthesis	152
4.3.6 The mechanism of acceleration and the acceleration regions	162
References	167

Chapter 5

RADIO ASTRONOMY AND COSMIC RAYS	M. ODA	169
5.1 Our Galaxy	169	
5.2 Radio Observations	170	
5.2.1 Radio telescopes	170	
5.2.2 Radio interferometers	174	
5.2.3 The sky as seen by radio waves	175	
5.2.4 Non-thermal and thermal radio emissions	175	
5.3 The Structure of Our Galaxy	180	
5.3.1 The observations of pulsars—Plasmas and magnetic fields in interstellar space	180	
5.3.2 Cosmic dust in the galactic magnetic fields	182	
5.3.3 21-cm radio emissions	183	
5.3.4 The spiral structure of our Galaxy	187	
5.3.5 Hot plasma regions	189	
5.4 Cosmic Electrons	189	
5.4.1 The energy spectra of cosmic electrons	189	
5.4.2 Synchrotron emission processes	192	
5.4.3 The halo—does it exist or not?	193	
5.5 The Crab Nebula—A Supernova Remnant	194	
5.5.1 The structure of the Crab nebula	194	
5.5.2 The combined spectra for radio, optical light and X-rays	195	
5.5.3 The total energy of ambient electrons	195	
5.5.4 Magnetic fields in the nebula	198	
5.5.5 Energy sources of the Crab nebula	199	
5.5.6 High-energy electrons	201	
5.5.7 Particle acceleration by the pulsar	202	
References	206	

Chapter 6

HIGH ENERGY ASTROPHYSICS	Y. TANAKA	207
6.1 Introduction	207	
6.2 X-ray Astronomy	207	
6.2.1 The identification of X-ray sources	207	
6.2.2 The Galaxy as seen by soft X-rays	210	
6.2.3 The mechanisms of X-ray emissions	214	
6.3 Large Hot X-ray Sources and Supernova	216	
6.3.1 Hot bubbles	216	
6.3.2 Association with supernovae	220	
6.3.3 Relation to the origin of cosmic rays	221	
6.4 Gamma-Ray Astronomy	223	
6.4.1 Gamma-ray emissions and the structure of the Galaxy	223	
6.4.2 Gamma-ray emissions and cosmic rays	227	
References	230	

Chapter 7**COSMIC RAYS IN THE ATMOSPHERE: HIGH-ENERGY****PHENOMENA**

S. MIYAKE 233

7.1	Introduction	233
7.2	Energy Spectra of the Primary Cosmic Rays	236
7.3	Attenuation of Cosmic Rays in the Atmosphere	239
7.4	Low-Energy Nucleonic Components	240
7.5	High-Energy Nuclear Interactions	242
7.5.1	Analysis of the experimental data	243
7.5.2	Model of multiple meson productions	244
7.5.3	Propagation in the atmosphere	248
7.5.4	Characteristics of other interactions	249
7.6	Extensive Air Showers	252
7.6.1	Electron component	254
7.6.2	Nucleonic components	257
7.6.3	Muon component	257
7.6.4	Problems related to the extensive air showers	258
7.7	Muons and Neutrinos	260
7.7.1	Momentum spectrometer	261
7.7.2	Underground observations	263
	References	268

Chapter 8**SOLAR-FLARE PARTICLES**

K. SAKURAI 271

8.1	Introduction	271
8.2	Production of High-Energy Particles in Solar Flares	272
8.2.1	Flare development and associated phenomena	272
8.2.2	High-energy phenomena in solar flares	275
8.3	The Chemical Composition of Solar-Flare Particles	278
8.3.1	The chemical composition and its energy dependence	278
8.3.2	Nuclear interactions in solar flares and nuclear gamma-ray emissions	283
8.3.3	Isotopic abundances in solar-flare particles	286
8.4	The Acceleration Mechanism of Solar-Flare Particles	287
8.4.1	Production of solar-flare particles	287
8.4.2	The acceleration mechanisms	289
8.5	The Behavior of Solar-Flare Particles in the Solar Corona and the Interplanetary Space	291
8.5.1	Propagation in the solar corona	291
8.5.2	Propagation in interplanetary space	292
8.6	Future Problems—Relation to Galactic Cosmic Rays	295
	References	296

Chapter 9**COSMIC RAYS IN THE INTERPLANETARY SPACE**

M. WADA and K. MURAKAMI 299

9.1	The Continuous Observations of the Cosmic Ray Intensity	299
9.2	The Modulation of Cosmic Rays	300
9.3	Problems Related to Ground-Based Observations	303
9.3.1	The response functions	303
9.3.2	The atmospheric effect	307
9.3.3	The geomagnetic effect	311
9.3.4	The effect of the earth's rotation and orbital motion	313
9.4	Cosmic Ray Phenomena in Interplanetary Space	315
9.4.1	The eleven and twenty-two year variations	316
9.4.2	The twenty-seven-day variation	321
9.4.3	The Forbush decreases	323
9.4.4	The change due to the magnetic field fluctuation	330
9.5	The Propagation of Cosmic Rays	332
	References	333

Chapter 10**ENERGETIC PARTICLES AND THEIR ACCELERATION IN PLANETARY MAGNETOSPHERES**

A. NISHIDA and T. TERASAWA 335

10.1	Introduction	335
10.1.1	The electric field in plasmas and the drift motion	338
10.1.2	The frozen-in principle of magnetic lines of force	340
10.1.3	Breakdown of the frozen-in principle—Ohm's law	341
10.2	Particle Acceleration by Steady Shock Waves	342
10.2.1	The formation of shock waves	342
10.2.2	The observations of shock waves	342
10.2.3	The reflection and acceleration of particles by shock waves	344
10.2.4	Excitation of hydromagnetic waves and ionic scattering	350
10.3	Particle Acceleration in the Magneto-Tail	355
10.3.1	The structure of the magneto-tail	355
10.3.2	The release of magnetic energy in the magneto-tail	358
10.3.3	Particle acceleration in the magnetically neutral layer	360
10.3.4	Evidence on the reconnection of magnetic field lines	363
10.3.5	Computer simulation of the reconnection of magnetic field lines	365
10.3.6	Energy transfer efficiency as related to reconnection	368
10.4	Particle Acceleration by the Parallel Electric Field $E_{ }$	369
10.4.1	Physical connection of the magnetosphere with the ionosphere	369
10.4.2	The electric field and current along magnetic field lines	272
10.4.3	Electrostatic shocks (electric double layer)	375

10.4.4	Particle scattering by plasma waves	378
10.4.5	The observations of particle acceleration by parallel electric fields	380
10.5	Concluding Remarks	381
	References	382

Chapter 11**THE SECULAR VARIATION OF COSMIC RAYS AND THE
INTERSTELLAR MATTER**

H. HASEGAWA 385

11.1	The Cosmogenic Nuclides produced by Cosmic Rays	385
11.2	Carbon-14 Dating and the Long-Term Variation of Cosmic Rays	387
11.2.1	The discovery of Carbon-14	387
11.2.2	The principles of dating	388
11.2.3	The variation of the ^{14}C concentration in the atmosphere	388
11.2.4	The relation to the geomagnetic secular variation	390
11.2.5	The distribution and movement of carbon atoms on the earth	392
11.2.6	Solar activity and the earth's environment	395
11.3	Beryllium-10 on the Ocean Floor and the Acceleration of Cosmic Rays	396
11.3.1	The dating of the ocean floor by means of Be-10	396
11.3.2	The age determined by the ^{10}Be analysis and the geomagnetic chronology	399
11.3.3	Acceleration mechanisms of cosmic rays	400
11.4	Meteorites and the Cosmogenic Nuclides in the Cosmic Dusts	402
11.4.1	The age of meteorites as irradiated by cosmic rays	402
11.4.2	Meteorites as targets of cosmic ray bombardment	402
11.4.3	Cosmic-ray-irradiated ages	404
11.4.4	Fall-out age of meteorites	407
11.4.5	The long-term variation of cosmic rays	407
11.4.6	The ancient records of solar-flare particles	409
11.4.7	The cosmogenic nuclides in the cosmic dust	410
11.5	New Horizon on the Measurement of Weak Radio-Activity	410
	References	411

Chapter 12**COSMIC RAYS AND COSMOLOGY**

H. SATO 413

12.1	The Expanding Universe	414
12.2	The Relativistic Cosmology	416
12.3	The Radiative Universe	417
12.4	Interactions in the Cosmic Matter	419
12.5	The Generation of the Universal Baryon Numbers	421
12.6	The Phase Transition of the Vacuum	423
12.7	The Phase Transition to Hadrons and the Decoupling of Neutrinos	425

12.8	The Syntheses of He and D	426
12.9	The Horizon and the Free Motion of Particles	429
12.10	Anisotropy of the Cosmic Blackbody Radiation	431
12.11	The Mean-Free Paths in the Cosmic Medium	433
12.12	The Upper-Limit of Cosmic Ray Energy	437
12.13	The Mass of Cosmic Relic Neutrinos	439
12.14	High-Energy Neutrinos	441
12.15	The Origin of Anti-Protons	444
	References	449

Chapter 13**PROSPECTS FOR THE FUTURE**
