PREFACE

Computer simulation is now widely recognized as a powerful tool and useful method at the current stage of research in space plasma physics. The expected role of computer simulation is to bridge the existing gap between theories and experiments/observations and to give a profound physical insight into highly tangled and nonlinearly coupled space plasma phenomena. One of the goals of space plasma physics in 1980's and 1990's is to elucidate the quantitative causal relationships of global and local energy flows in space plasma environment and establish the space plasma physics via cooperative studies among three important elements of observations, theories and computer simulations.

Based on such recognition, Dr. M. Ashour-Abdalla (UCLA/USA), Dr. R. Gendrin (CNET/France) and both of us met together at the 20th General Assembly of URSI at Washington D. C. in 1981 to discuss what we should do and what we could do, reaching a conclusion that it is time to establish an International School of Space Simulations (ISSS). The objectives of the ISSS thus organized are firstly to educate and stimulate graduate students and young scientists, secondly to exchange information on updated simulation techniques and thirdly to have mutual discussions among observational, theoretical and simulational scientists in the field of space physics. The first ISSS were organized by Prof. P. Coleman, Prof. T. Obayashi, Dr. H. Okuda in addition to the above four members. The first ISSS was held at Kansai Seminar House in Kyoto from Nov. 1 to Nov. 12, 1982. More than one hundred scientists and students attended the ISSS from various countries of the world. The ISSS ended in great success with an understanding that this sort of tutorial and academic activities are useful and should be continued. The ISSS is thus planned to be held at every one-and-half or two years in Japan, USA and Europe in turns.

The present volume is edited not as simple proceedings of selected lectures at the First ISSS but rather as a form of textbook of computer simulations of space plasmas for students and young scientists. Therefore only the lectures dealing with simulation techniques and philosophies are selected and other papers on theories and observations given at the First ISSS are not included. The subject index is limited only to the terms related to techniques and concepts used in computer simulations.

Finally we would like to thank Mrs. Keiko Miwa, Mr. Toru Yamada and students of RASC/Kyoto Univ. for their assistance of editorial works and retyping all the materials in this book. Without their efficient helps this book would not have been in the current form.

CONTENTS

preface..... v

PART I PARTICLE SIMULATIONS : 1

INTRODUCTION TO PARTICLE SIMULATION MODELS
AND
OTHER APPLICATION TO ELECTROSTATIC PLASMA WAVES : 3

Hideo Okuda

part I : Introduction to Particle Simulation Models
in Plasma Physics

- 1. Introduction..... 4
- 2. Electrostatic Particle Simulation Models..... 5
- 3. Numerical Methods Using Finite-Size Particles..... 11

part II : Application of Particle Simulation
to Electrostatic Ion Cyclotron Waves
on Auroral Field Lines

- 1. Introduction..... 25
- 2. Results of Simulation Without a Source..... 26
- 3. Results of Simulation With a Source..... 31
- 4. Formation of Auroral Arc Elements..... 35
- 5. Discussions..... 39
- References..... 40

PARTICLE SIMULATION OF ELECTROMAGNETIC WAVES
AND
ITS APPLICATION TO SPACE PLASMAS : 43

Hiroshi Matsumoto and Yoshiharu Omura

- 1. Introduction..... 43
- 2. Elementary Concepts and Models in Particle Simulations..... 45
- 3. Particle Code valid for both Electromagnetic and
Electrostatic Wave Models..... 53
- 4. Long-Time-Scale Code for Monochromatic Whistler Interaction..... 66
- 5. Diagnostic Tools..... 77
- 6. Application to Space Plasma Wave Phenomena..... 84
- 7. Concluding Remarks..... 101
- References..... 102

RELATIVISTIC CODE APPLIED TO RADIATION GENERATION :103

A. T. Lin

| | |
|--|-----|
| 1. Introduction..... | 103 |
| 2. Boundary Conditions for Outgoing Electromagnetic Waves..... | 105 |
| 3. Electron Cyclotron Maser Instabilities..... | 110 |
| References..... | 116 |

MODERN DEVELOPMENT IN PARTICLE SIMULATION :117

J. C. Adam

| | |
|-----------------------------------|-----|
| 1. Introduction..... | 117 |
| 2. Implicit Time Integration..... | 118 |
| 3. Moment Method..... | 121 |
| 4. Direct Method..... | 125 |
| 5. Conclusions..... | 129 |
| References..... | 130 |

PART II MHD SIMULATIONS :131

PRINCIPLES OF MAGNETOHYDRODYNAMIC SIMULATION
IN SPACE PLASMAS :133

Tetsuya Sato

| | |
|--|-----|
| 1. Introduction..... | 133 |
| 2. MHD Equations..... | 135 |
| 3. Guiding Principles of MHD Simulation..... | 138 |
| 4. Local MHD Model..... | 141 |
| 5. Global MHD Model..... | 144 |
| 6. Boundary Conditions..... | 146 |
| 7. Simulation Code and Diagnostics..... | 149 |
| 8. Closing Remarks..... | 152 |
| References..... | 153 |

MHD MODELLING OF THE EARTH'S MAGNETOSPHERE :155

C. C. Wu

| | |
|---------------------------|-----|
| 1. Introduction..... | 155 |
| 2. Global MHD Model..... | 156 |
| 3. Numerical Methods..... | 158 |
| 4. Results..... | 169 |
| 5. Conclusion..... | 176 |
| References..... | 177 |

**NUMERICALLY-SIMULATED FORMATION
 AND
 PROPAGATION OF INTERPLANETARY SHOCKS** :179

S. T. Wu

| | |
|---|-----|
| 1. Introduction..... | 179 |
| 2. Numerical Methods and Mathematical Models..... | 180 |
| 3. Computation Procedures and Physical Results..... | 187 |
| 4. Concluding Remarks..... | 198 |
| References..... | 199 |
| Appendix..... | 200 |

ANOMALOUS TRANSPORT BY KELVIN-HELMHOLTZ INSTABILITIES :203

Akira Miura

| | |
|------------------------------------|-----|
| 1. Introduction..... | 203 |
| 2. Basic Equations and Models..... | 204 |
| 3. Numerics..... | 207 |
| 4. Numerical Results..... | 208 |
| 5. Summary and Discussion..... | 221 |
| References..... | 223 |

PART III OTHER-METHOD SIMULATIONS :225

PARTICLE BEHAVIOR IN THE MAGNETOSPHERE :227

R. A. Wolf and R. W. Spiro

| | |
|--|-----|
| 1. Introduction..... | 227 |
| 2. Basic Equations and Physical Assumptions..... | 230 |
| 3. Model Inputs..... | 236 |
| 4. Program Logic and Numerical Methods..... | 242 |
| 5. Review of Results..... | 247 |
| 6. Concluding Comments..... | 250 |
| References..... | 252 |

**HYBRID SIMULATION TECHNIQUES APPLIED TO
 THE EARTH'S BOW SHOCK** :255

D. Winske and M. M. Leroy

| | |
|---------------------------|-----|
| 1. Introduction..... | 256 |
| 2. Numerical Methods..... | 260 |
| 3. Applications..... | 268 |
| 4. Summary..... | 275 |
| References..... | 277 |

| | |
|---|-------|
| VLASOV SIMULATION OF ION ACOUSTIC DOUBLE LAYERS | : 279 |
|---|-------|

G. Chanteur

| | |
|---|-----|
| 1. Introduction..... | 279 |
| 2. Description of "Vlasov" Code..... | 280 |
| 3. The Formation of Ion Acoustic Double Layers..... | 288 |
| References..... | 300 |

| | |
|--|-------|
| SIMULATION MODELS FOR SPACE PLASMAS AND BOUNDARY CONDITIONS AS A KEY TO THEIR DESIGN AND ANALYSIS | : 303 |
|--|-------|

Christian T. Dum

| | |
|--|-----|
| 1. Introduction..... | 304 |
| 2. Simulation Models and Boundary Conditions Derived from Laboratory Plasmas..... | 308 |
| 3. Simulation Models and Boundary Conditions Specific of Space Plasmas..... | 323 |
| 4. Boundary Conditions and the Solution of Field Equation..... | 351 |
| 5. Boundary Conditions for Charged Particle..... | 359 |
| 6. Coupling of Local and Global Dynamics..... | 364 |
| References..... | 370 |
