

SUBJECT INDEX

A

absorbing
 - boundary 358, 361
 - region 107
 accuracy tests 245
 adaptive method 167
 alias 17, 47
 Alfvén transit time
 135, 138, 168, 332
 approximation 227
 area sharing scheme 52
 algorithm 17
 artificial
 - diffusion scheme 186
 - boundaries 305
 - damping 149
 - diffusion 189
 - viscosity 169, 210
 attenuation factor 57

B

black box 140
 Boltzmann distribution 21
 boundary condition
 5, 74, 105, 146
 , 170, 266, 285, 303, 338

C

Cauchy problem 280
 cell size 260
 central difference 53, 186, 245
 CFL condition 48, 139, 160
 charge 6
 cloud-in-cell 45
 collective phenomena 7
 collision 7, 10
 collisional effect 6
 compatibility condition 365
 computer code 151
 conservative form 160
 convergence 281
 Coulomb forces 7
 Courant condition 139, 281
 Crank Nicholson scheme 282
 current 6

D

Debye length 10, 280, 309
 diagnostics 77, 149, 266, 369

differential equation 6
 diffusion time 168
 digital filter 62
 dipole magnetic field 72
 direct method 125
 Dirichlet boundary condition
 356
 discretization 47,, 181, 281
 dispersion relation
 9, 48, 118, 332
 distribution 82
 donor cell 264, 285
 dynamical instability 186

E

effective viscosity 157
 electro plasma period 135
 electrodynamic coupling model
 333
 electromagnetic
 53, 103, 124, 127
 - boundary condition 357
 electron debye length 135
 electrostatic particle code 289
 electrostatic 3, 53 121, 125
 - simulation 5, 10, 17
 energy 77, 267
 - conversion equation 146
 equations of motion 69

F

filtering 62, 151
 finite
 - difference 149, 160
 - difference equation
 6, 17, 104
 - difference methods 182
 - difference scheme
 3, 140, 291, 305
 - grid spacing 306
 - size particle 3, 6, 7
 - sized superparticle 45
 first order damping 118
 fixed boundary 148
 fixing 170
 fluid
 - equation 123
 - models 365

flux corrected transport		Lax Wendroff scheme	285
algorithm	283	leap frog	
Fokker-Planck equation	10, 311	- integration	284
forward difference	160	- scheme	17, 119
Fourier		linear spline	127
- analysis	79	long time scale	66
Fast Fourier Transform		longitudinal component	104
108, 306, 351		low frequency phenomena	117
- expansion scheme	151	low pass filter	118
- space	8		
free boundary	148, 305, 338	M	
full-implicit difference scheme		macroscopic and microscopic	
	190	dynamics	320
full-integer grid	48	macroscopic process	134
G		matrix equation	122
gas dynamic model	180	Maxwell's equation	5, 59, 104
gaussian		MHD	
- form factor	11	- equations	135, 156
- particle	8	- model	155, 189
- shape	105	- simulation	133, 135
Glimm scheme	285	global MHD	141, 155, 156, 229
Godounov splitting	285	local MHD	14, 141
grid	59, 138	microscopic process	134
guiding center model	19	moment method	121
H		Monte Carlo methods	311
half-integer grid	48	multi beam instability	23
hybrid		multi fluid equations	137
- code	332	multiple expansion method	13
- model	260, 365	multiple time step scheme	54
- simulation	255, 276, 322		
I		N	
implicit	118, 263	Neumann boundary condition	356
- scheme	105, 364	NGP	15, 45
initial		nonperiodic boundary condition	
- condition	5, 220, 266		355
- loading	23, 359	nonuniform grid system	165
input boundary	149	numerical	
intermediate step	183	- accuracy	7, 305
interpolation	15	- diffusion	150
iterative procedure	123	- dissipation	140, 160
K		- divergence	4
kinetic equations	5	- instability	
Klimontovich equation	5	17, 151, 186, 245, 305	
L		- modeling	142
Lapidus difference scheme	186	- resolution	145
large time steps	117	- smoothing	4, 151
Lax scheme	160	- technique	152
		- truncation errors	157
		O	
		one-dimensional	
		13, 122, 180, 265, 289, 329	

- gas dynamics 158
- open boundaries 317
- outflow boundary condition 358
- outgoing electromagnetic waves 105
- output boundary 148

P

- particle
 - code 117, 282
 - collision 4
 - orbits 4
 - simulation 3, 45, 104, 135, 321
 - -in-cell 45, 260
 - -moving algorithm 246
- periodic boundary condition 12, 280, 351, 359
- phase errors 5, 22, 119
- phenomenological
 - damping rate 108
 - dissipation 365
- physical insight 152
- physical jump conditions 159
- plasma dielectric constant 9
- Poisson's equation 12, 13, 122, 206, 282
- post-processor 77
- predictor corrector method 19, 20
- predictor 123
- projection operator 106
- proton
 - gyroperiod 135
 - gyroradius 135

Q

- quasi neutral particle
 - simulation 20
- quasi-static 227
- quasi-three dimensional 180
- quiet start 23

R

- random number generator 23
- Rankine-Hugoniot equation 66, 159, 182
- recycling of particles 330
- reflecting
 - boundary 148, 358
 - coefficient 107

- relativistic equation of motion 104
- relativistic code 103
- relocate 52, 59
- rescaling 65
- resistive boundary layers 107
- resistivity 157
- Rice convection model 227
- Rusanov's scheme 169

S

- second order accuracy 287
- self-consistent 45, 104, 139, 305
- self-force 48
- shape factor 7
- shape function 127
- sheet model 6
- shock
 - capturing technique 158
 - -capturing-difference scheme 182
- slab geometry 106
- slow-flow 227
- solid boundary 183
- space centered difference
 - scheme 263
- spatial grid 13, 104
- spatial resolution 146, 167
- spectral method 12
- spline 16
- spurious numerical reflections 305
- stability 122, 281
- staggered dual grid system 52
- static instability 186
- strang splitting 283, 285
- superparticle 6, 45
- symmetry condition 360

T

- third order damping 119
- three dimensional
 - simulation 4, 143, 170, 330
 - time centered 17
 - time step 53, 104
 - time-dependent 180
 - transverse components 104
 - two dimensional 14, 122, 180, 189, 265, 319, 330, 333

two step Lax Wendroff method	151
U	
unit system	63
V	
Vlasov	
- code	279, 280, 311
- equation	4, 6, 136
- Landau equation	3
- Maxwell equation	8, 136
- Poisson system	284
- Poisson equations	308
Von Neumann-Richtmeyer's scheme	186
W	
weight function	15
